

DIVERSYS. TECHNOLOGY FOR A WORLD WITHOUT WASTE.

Optimize your Recycling & Waste Management Programs with New, Unparalleled Data Management Capabilities

Diversys is a revolutionary solution that ensures you can run your recycling or waste management programs at peak performance while meeting—and proving that you’ve met—your targets and goals, whether you’re focusing on:

- ESG initiatives like diverting waste from landfill and reducing greenhouse gas (GHG) emissions, or
- Streamlining your overall operations to become paperless, more productive and profitable

Diversys’ latest enhancements transform program management for all waste streams by digitally tracking end-of-life materials, starting from when they’re collected and processed right through to when they’re analyzed and reported on.

With its focus on real-time, high-quality data, Diversys ensures you can make critical and time-sensitive decisions when they matter, relying on the latest data—and not stale or outdated information—from across your entire operation.

With Diversys, you can **consistently measure and improve** the health and performance of your programs and operations.

14.4%

is the growth of global emissions from landfills since 1990 and has exceeded 1 billion tonnes annually for the first time ever

8.6%

of used materials are recycled today globally.

~300%

ROI is possible in the first year of adopting digital transformation for your waste or recycling program

Diversys allows you to adapt to your changing business and operational needs in real-time.

- **Automate Tracking of Material Flows and Overall Performance.** Digitally track and measure everything—from specific diverted waste by unique material to the performance of specific haulers, processors, and other program participants—to set and track progress towards your targets.
- **Leverage Data of Unparalleled Integrity with a Few Clicks.** Capture, store and access real-time data that is accurate, safeguarded and traceable down to individual pickup and drop off transactions at collector and processing sites, providing full accountability and traceability across your organization.
- **Create Timely, Detailed Reports for Tracking Progress and Making Critical Decisions.** Generate reports—using current and not outdated data—on inventory, transactions, volume of waste collected and diverted from landfill or GHG emission reduction and related GHG (MTCO2) savings. Create and access historical collection summaries for benchmarking or trending.
- **Configure Tailored Dashboards for Live Data Visualization Quickly and Easily.** Create a dashboard with widgets specific to your business requirements and get an instant picture of how you're progressing towards your goals in real time. View and analyze anything from users and transactions to volume and weight of collected materials and GHG emission reduction. Easily add or change widgets to match your growing needs.
- **Provide Centralized Data Hub Access to All Users in your Program.** Ensure all users—from those doing collections in-the-field to those managing programs in the office—are working from the same source of current data that is non-disputable, accurate, fully traceable and collected from across your operation. Ensure those in the office know what happens with collections and drop offs exactly when they occur.
- **Create an end-to-end paperless chain of custody via the mobile app and web portal.** Create a paper-free chain of custody—with full visibility to the transaction level—using the mobile app for in-field activities like pickups and drop offs and the web portal for in-office program management. Seamlessly manage programs across various waste streams and geographic zones.

As a complete SaaS solution, you can be up and running in no time, without disruption to your business. With Diversys, you can:

- Log-in and run your operations from day one without worrying about IT, installations, upgrades or maintenance—Diversys takes care of it all
- Integrate easily with your other key business systems (CRM, ERP, financial tools, etc.)
- Realize a positive ROI in a matter of weeks, not years
- Work with a dedicated implementation team for fast, proven onboarding and ongoing support as required

Go digital and paper free with **e-manifests** to eliminate error-prone, costly and cumbersome processes.

Capture, store, access and view **real-time data** that is geo-tagged for accuracy and fully traceable for complete accountability and transparency.

Measure, monitor and assess your results and performance with live dashboards and reports—all featuring current, real-time data—for streamlined compliance and other reporting.

Take your recycling management to the next level.
